

CIM Spreading Squeegee

A fast, effective, and efficient way to apply CIM coatings and linings.

Especially useful for deck or floor projects.

CIM Squeegees work best on flat, horizontal surfaces. A proven productivity enhancer, CIM Squeegees spread the mixed product to a consistent mil thickness. During application, the Squeegee's notched blade controls the thickness of the CIM liner, spreading it evenly over the work area.

Specifications

CIM Squeegee blades are made of a sturdy notched neoprene rubber that is perfect for ensuring smooth and even coverage of CIM mixed product.

Squeegee blades are 30" long and come in 20 and 60 mil nominal sizes.

Sturdy hardware sets consisting of metal brackets and wooden handles make for easy handling.

Application Technique

Existing environmental and substrate conditions present during application may have a significant effect on the finished application, including material thickness.
